

Application 1

The "better cube" is a cube that fits together to form a bookshelf, desk, et cetera. You construct it by nailing 5 1ft by 1ft square pieces of wood together to make a cube (with one side missing). You next get a 1ft. by 1ft sheet of glass and attach it with hinges to the 5 sided cube. The final step is for you to use industrial grade epoxy to attach industrial grade velcro to the outside of the cube. You can then get as many of these as you want together to make things
